

# BCM next

---

Hi Iswar,

This is a simple test to assess your skills on the frontend. You can make this task using React as a framework.

## Task Description

Develop a simple **questions/answers** management app that allows to manage questions along with options. It should be a SPA app with 3 screens:

- List questions
- Add Question
- Edit Question

Your task is to build a SPA app that uses the browser's **local storage** as a data store for the app.

Please use Bootstrap as a UI framework for HTML/CSS. Also the focus of this task is not on UI design. So you are free to be creative with your own design skills.

**For your reference here is the wireframe screenshots for the 3 screens to be developed.**

## Screen 1

**Questions** [\(+ Add new question\)](#)

Question 1	<a href="#">Edit</a>	<a href="#">Delete</a>
Question 2	<a href="#">Edit</a>	<a href="#">Delete</a>
Question 3	<a href="#">Edit</a>	<a href="#">Delete</a>
Question 4	<a href="#">Edit</a>	<a href="#">Delete</a>
Question 5	<a href="#">Edit</a>	<a href="#">Delete</a>

## Screen 2

**Add Question** [Cancel](#) Save

**Question Title\***

Required (max 55 characters)

**Options**

Delete
